

## Dr Alfonso Galderisi

Dr Galderisi is currently Assistant Professor of Pediatrics at Yale University (CT, USA) and his research activities focuses on two main branches: the physiology of beta cell function and insulin sensitivity in the early stages of type 1 and type 2 diabetes in youths and the effect of glucose changes on brain development of neonates.

He graduated at the Second University of Naples (Italy) and completed his pediatric training and his PhD at the University of Padova (Italy).

His research is supported by the European Commission, the Juvenile Diabetes Research Foundation, and the US NIH.
