

Dr Matias Wagner

Matias Wagner is a human geneticist from Munich. After his studies at LMU Munich, he received his doctoral degree from Newcastle University on the genetics of muscle diseases. He spent his training at the Technical University of Munich and now additionally works in the care of neuropaediatric patients at LMU Munich. In this context, he tries to improve the care of children with rare diseases in a multidisciplinary way and to treat them in a targeted manner.

His research focuses on monogenic neurodevelopmental disorders and epilepsies. On the one hand he tries to improve diagnostics by using new molecular genetic methods and on the other hand to develop therapeutic strategies.
